DETAILED ACTION

Claim Objections

1. Claims 5-7 are objected to because of the following informalities: claims 5 and 6 depend from themselves and is improper. Claim 7 depends from claim 6 and is thus improper too. Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

The changes made to 35 U.S.C. 102(e) by the American Inventors Protection Act of 1999 (AIPA) and the Intellectual Property and High Technology Technical Amendments Act of 2002 do not apply when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. Therefore, the prior art date of the reference is determined under 35 U.S.C. 102(e) prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. 102(e)).

3. Claims 1 and 2 are rejected under 35 U.S.C. 102(e) as being anticipated by Welch(US 6,268,777 new cite by examiner).

Art Unit: 2817

The reference by Welch discloses a VCO, LC type (see figure 2), comprising the LC resonator(22) with first pair of VCCS(P3,P4 of a first type), and a second pair of VCCS(N1,N2 of a second type); a voltage controlled (VCCS)current source of a first type is shown(including P1) supplying a BIAS control current to the VCO. A control signal(Fin) is the control voltage for the VCO. The RSBM replica bias is shown in block 28 comprising a second(P2,5), a third(P9,10)VCCS of the first type and a fourth (N3,4) VCCS of a second type of MOS. Note a first conductor connected to the direct voltage source(Vdd), external to the VCO circuit, and the source is also connected to the reference conductor at the Vss(gnd) terminal.

Response to Arguments

4. Applicant's arguments with respect to claim1 have been considered but are moot in view of the new ground(s) of rejection.

Allowable Subject Matter

5. Claims 3-7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
